

## Webroot Spysweeper Walkthrough

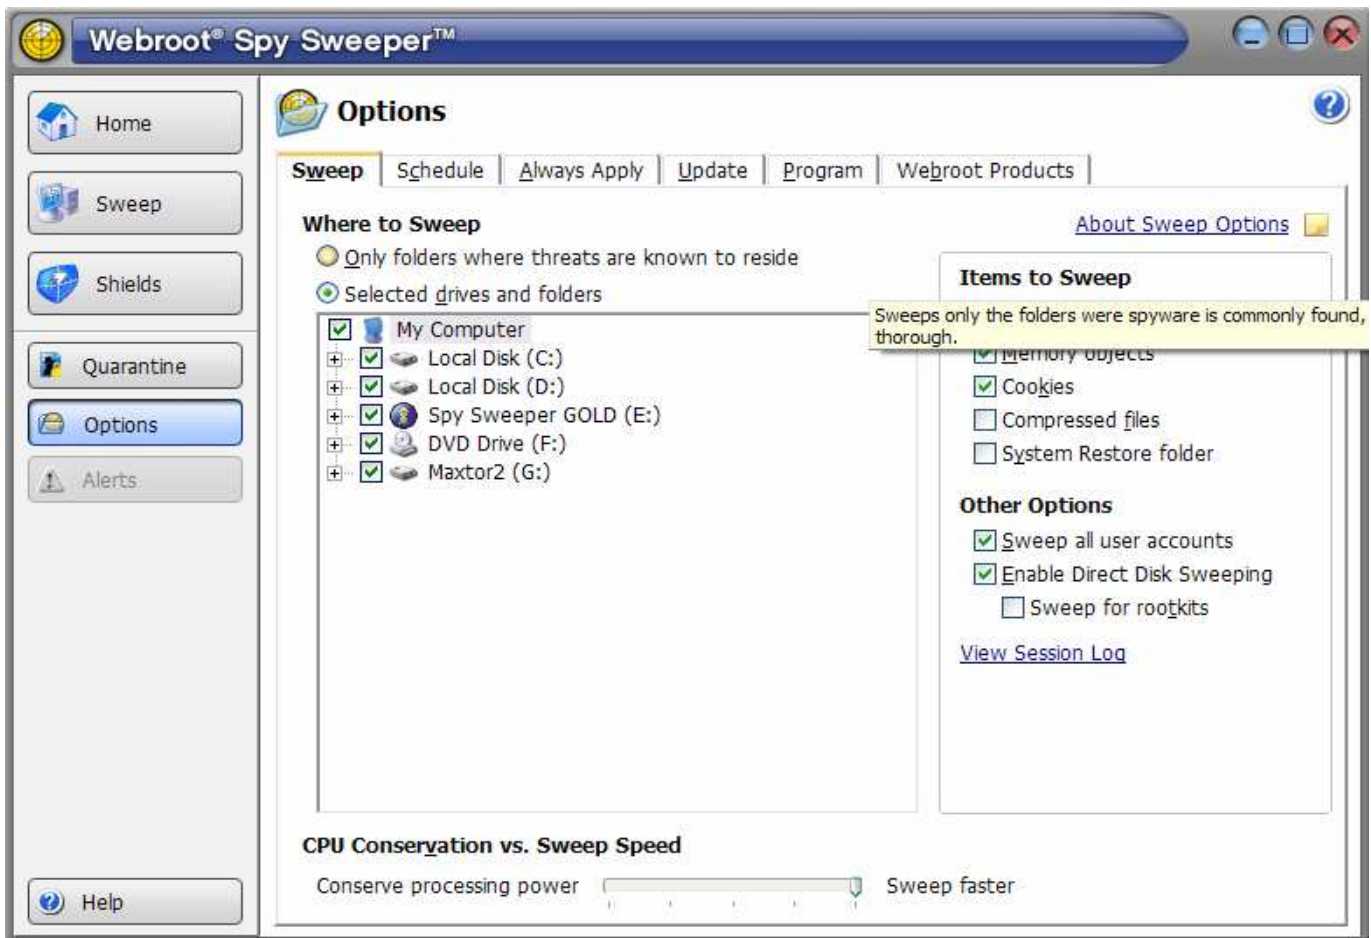

### Step 1:

Locate the Spysweeper Icon by going to your start button: START > ALL PROGRAMS > WEBROOT > SPYSWEEPER > SPYSWEEPER. You may also access it by Double-Clicking the Spysweeper Icon in your taskbar tray (by the clock in the lower right-hand corner of your desktop). This will bring you to the Spysweeper Home Screen and the window below should appear.

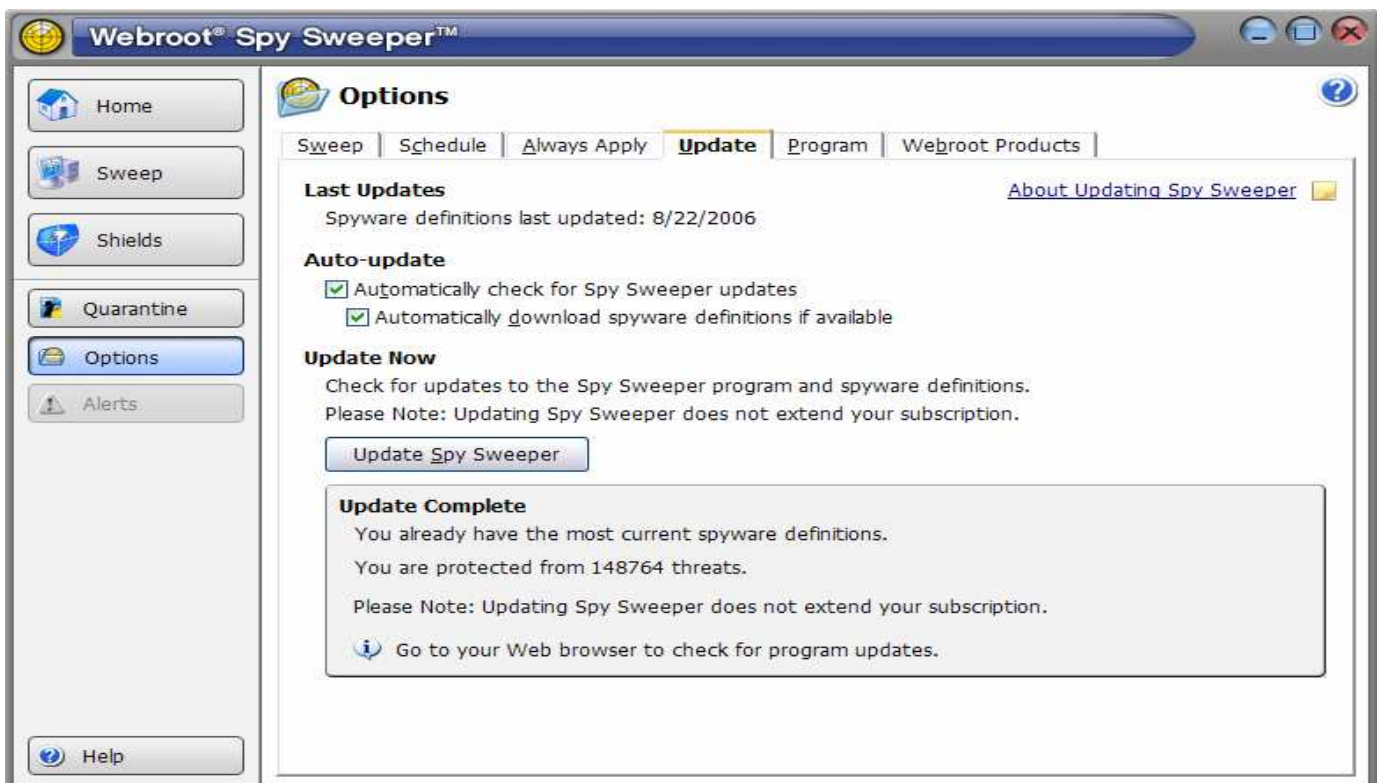

### Step 2:

Check to see if there are any updates available from the Webroot server. To do so, Left-Click on the "Options" button in the lower left-hand corner of the Home Screen. A dialogue box similar to the one below should appear.

Left-click the “Update” tab at the top of the screen and Left-click the “Update Spysweeper” button; this process will take a few seconds to determine the updates necessary for your PC. After the system scan is complete the following dialogue box should appear.

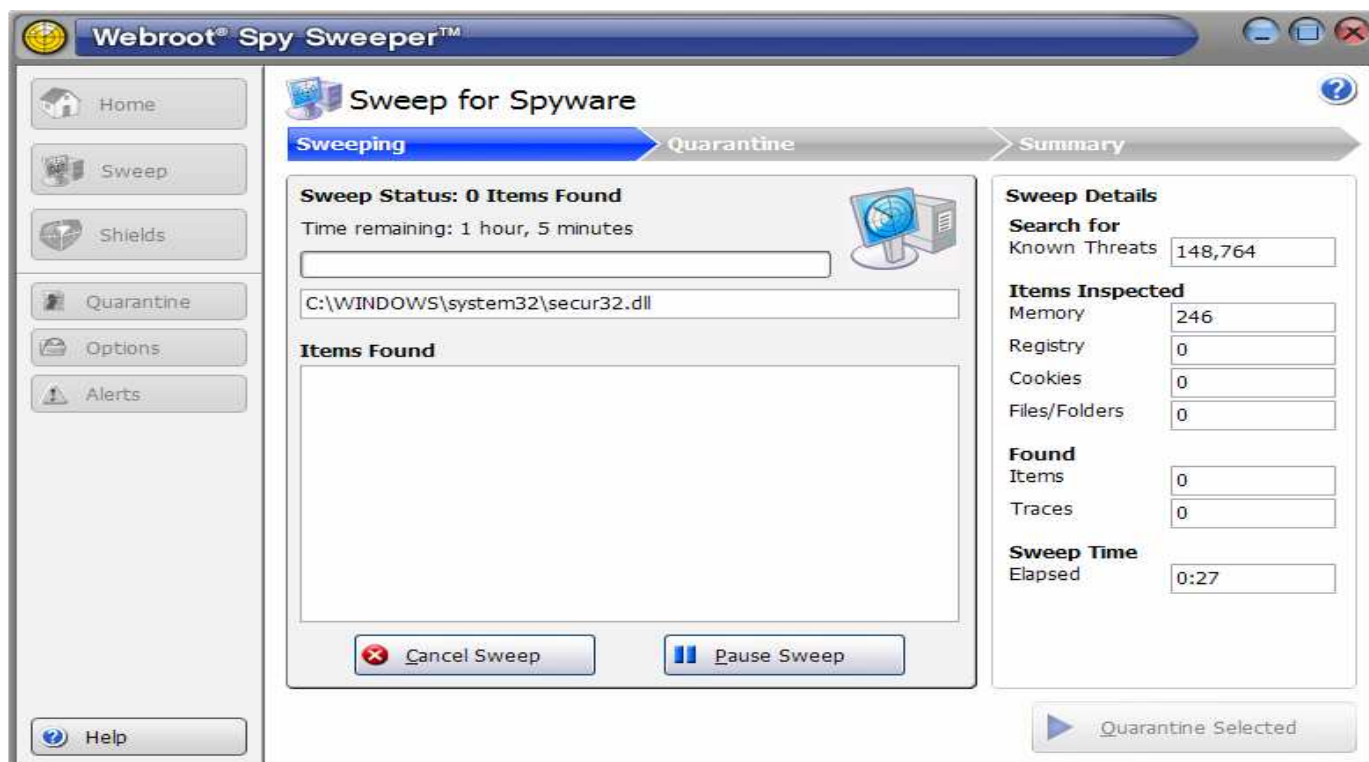

If updates are available from the Webroot homepage, Left-click “Upgrade Now” to automatically update your software to its current version. If no updates are available, close the Webroot homepage and return to the update page in the Options menu. Left-click “Sweep” in the upper left-hand corner of the screen; the following dialogue box should appear.

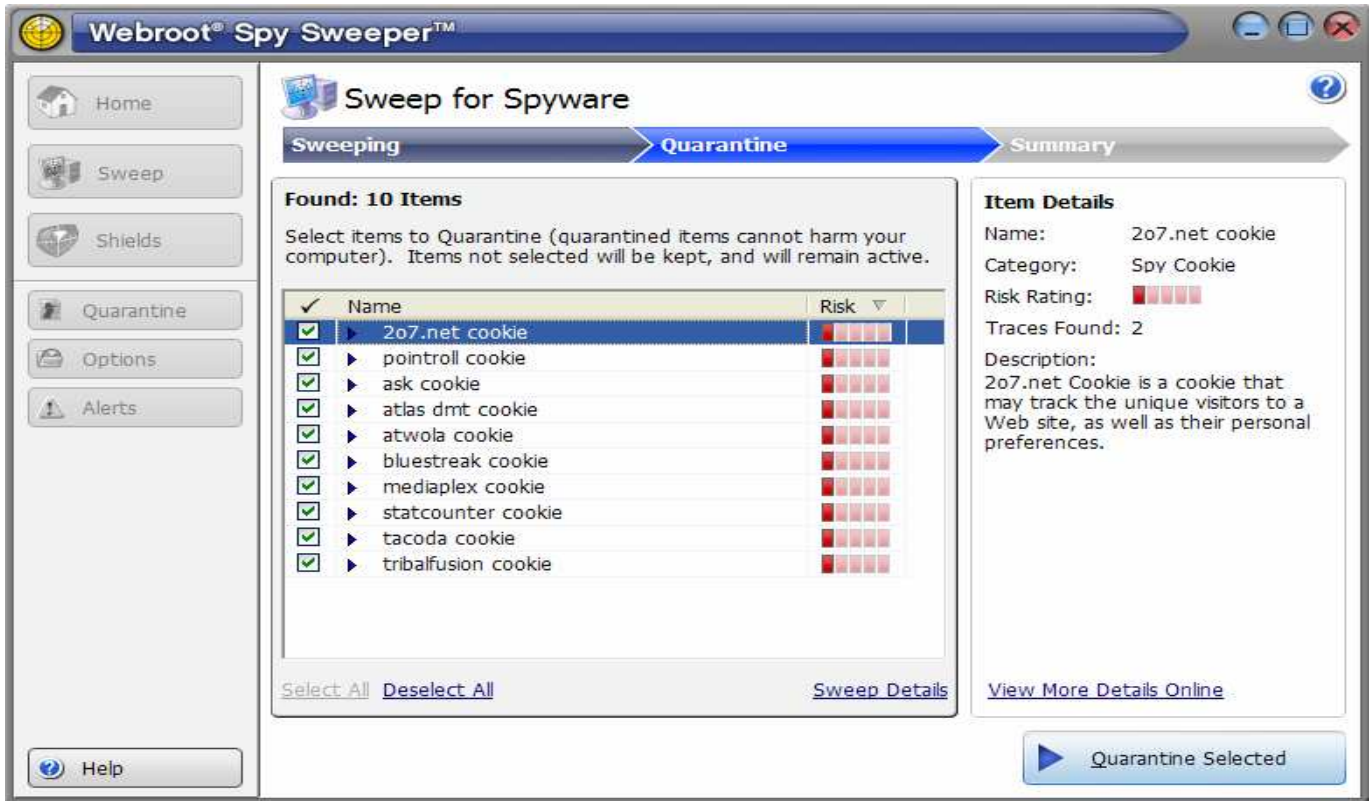

### Step 3:

Scan your PC. Left-click on “Start Sweep” to initiate your system scan. The following dialogue box should appear.

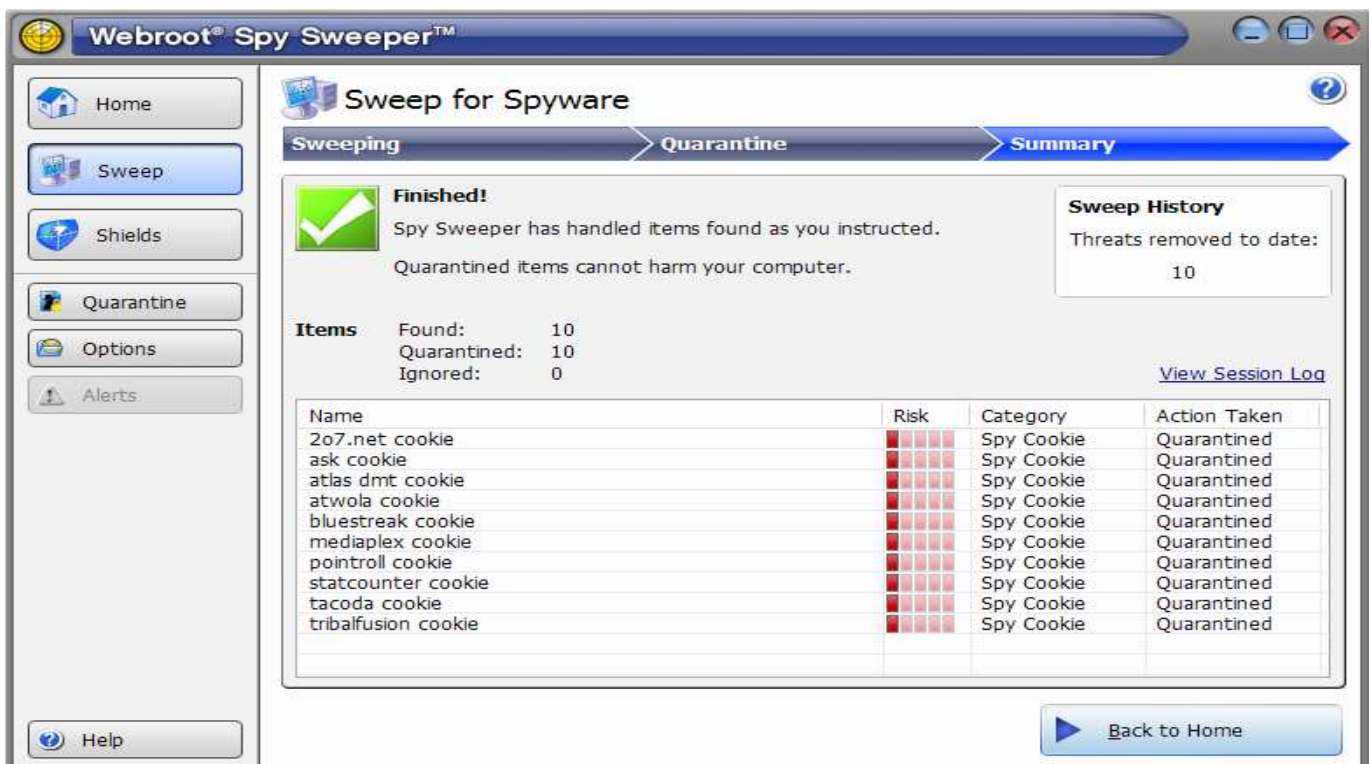

After the scan has completed, any items detected will be listed in the “Items Found” area of the screen. Immediately following the scan, the following dialogue box should appear.

**Step 4:**

Quarantine the spyware. Left-click on “Quarantine Selected” in the lower right-hand corner of the screen. Each item should be highlighted for quarantine by default. After the items have been removed to quarantine, the following dialogue box should appear.

At this point your system is clean. Left-click “Back to Home” to continue using the software, otherwise close the window altogether and continue using the PC.

*\*Note: You may choose to remove the items manually from the quarantine file, Spysweeper will do this on its own over a period of time. If you choose to do so manually however, Left-click the “Quarantine” button on the left, choose “Select All” to select each item in the quarantine, then choose “Delete Selected” to completely remove them from your PC.*
