

## Disk Cleanup Walkthrough

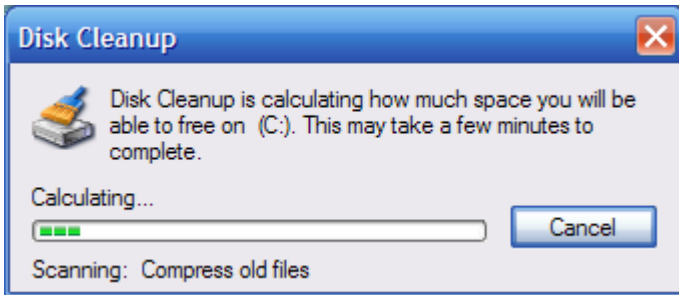

Step 1:

Locate the disk cleanup utility by going to your start button: START > ALL PROGRAMS > ACCESSORIES > SYSTEM TOOLS > DISK CLEANUP. Left-click on the “Disk Cleanup” option. The dialogue box below will appear.

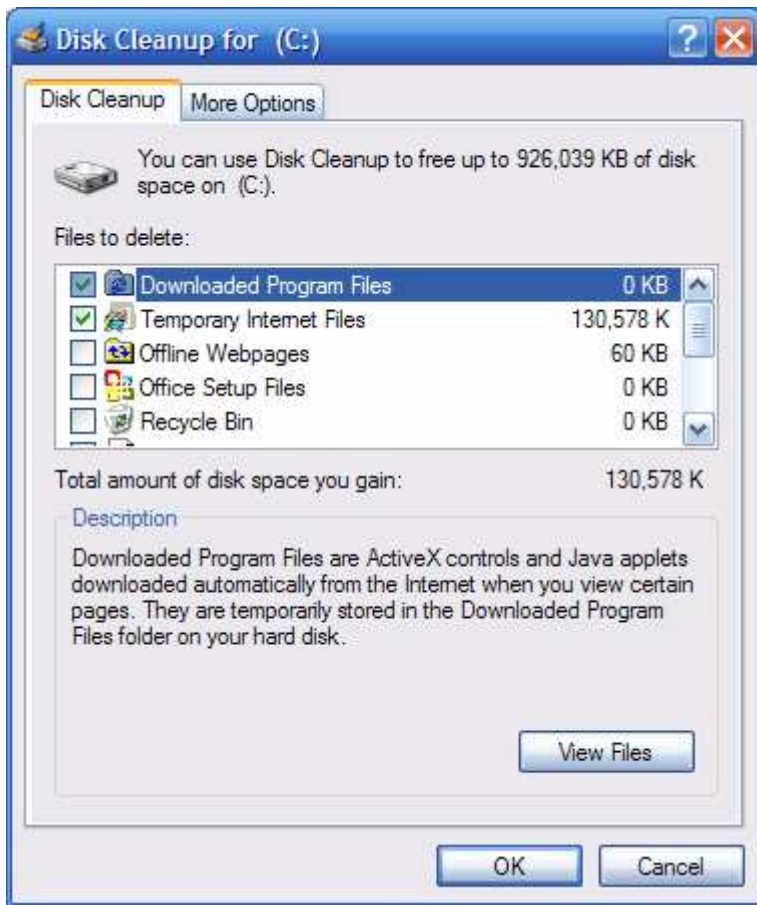

Step 2:

Select your “C:” drive from the dropdown menu if it is not already. Left-click “OK”. The dialogue window below will appear.

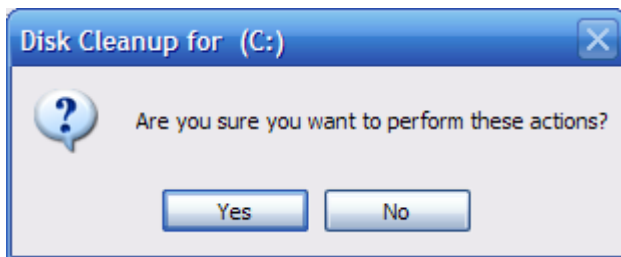

Step 3:

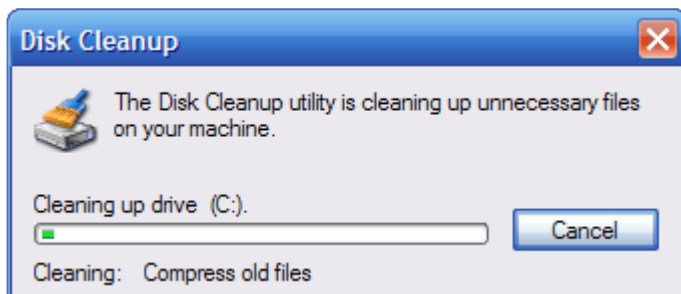

This process will take several seconds to complete. After your computer has detected all the files in which you need to remove, the dialogue box below will appear.

Select each option in the list that has a value greater than zero (“0”) on the right hand side of the list. After you have selected each item to be cleaned, left-click on “OK”. The dialogue box below will appear.

Step 4:  
If you have selected each value properly, left-click “YES” to continue. The dialogue box below will appear.

Step 5:

Wait... This process will take several minutes to complete, depending upon how cluttered your system has become. After this cleaning process is complete, the dialogue box will disappear and the process is complete.

Note: Expect your PC to slow down considerably during this process. It is not advised that you work with any data that could potentially be lost due to a system lock up during this process. Because the entire process will only take a few minutes, let the utility run to completion before continuing with what you were doing.
